

Sikadur[®]-31 SBA S-02

Segmental Bridge Adhesive

Construction

Product Description

Sikadur[®]-31 SBA S-02 is a solvent-free, thixotropic, structural two part adhesive especially formulated for segmental bridge construction.

Uses

- Segmental bridge adhesive for use on substrates at +30°C to +45°C

Characteristics / Advantages

Sikadur[®]-31 SBA S-02 has the following advantages:

- Meets and / or exceeds International and National Standards (FIP, BS, ASTM etc.)
- Lubricates the surfaces and makes location of the shear keys easier
- High strength and high modulus of elasticity
- High initial and ultimate strengths
- Impermeable to liquids and water vapour
- Minimal water absorption
- Suitable for dry and damp concrete surfaces (moisture tolerant)
- Hardening is not affected by humidity
- Thixotropic: non-sag in vertical and overhead applications
- Solvent free
- Hardens without shrinkage
- Different coloured components (for mixing control)
- No primer needed
- Good chemical resistance

Note : There are at least 5 types of Skadur-31 SBA available for substrate temperatures of +5°C to +60°C. Please consult our technical department.

Product Data

Form

Soft, pasty mortar when mixed

Colours

Part A: white
Part B: black
Part A+B mixed: concrete grey

Packaging

6 kg (A+B) Pre-batched unit, Pallets of 480 kg (80 x 6 kg).

Storage

Storage Conditions / Shelf-Life

24 months from date of production if stored properly in original unopened, sealed and undamaged packaging, in dry conditions at temperatures between +5°C and +30°C. Protect from direct sunshine.

Technical Data

Chemical Base

Epoxy resin

Density	1.80 kg/lit \pm 0.1 kg/lit (part A) (at +20°C) 1.80 kg/lit \pm 0.1 kg/lit (part B) (at +20°C) 1.80 kg/lit \pm 0.1 kg/lit (part A+B mixed) (at +20°C)																		
Sag Flow	Flow at 9.5mm (according to FIP 5.3 with measurement according to ASTM D2730) (Requirement: Flow at minimum thickness of 3 mm).																		
Squeezability	(According to FIP 5.4) <table border="1"> <thead> <tr> <th>Squeeze Load</th> <th>Squeeze Area</th> </tr> </thead> <tbody> <tr> <td>15 kg</td> <td>5280 mm²</td> </tr> <tr> <td>200 kg</td> <td>5540 mm²</td> </tr> <tr> <td>400 kg</td> <td>6530 mm²</td> </tr> </tbody> </table>	Squeeze Load	Squeeze Area	15 kg	5280 mm ²	200 kg	5540 mm ²	400 kg	6530 mm ²										
Squeeze Load	Squeeze Area																		
15 kg	5280 mm ²																		
200 kg	5540 mm ²																		
400 kg	6530 mm ²																		
Layer Thickness	30 mm maximum When using multiple units, one after the other, do not mix the following unit until the previous one has been used in order to avoid a reduction in handling time.																		
Change of Volume	Hardens without shrinkage.																		
Thermal Stability	Heat Deflection Temperature (HDT):(According to FIP 5.10) Curing conditions: 7 days / +40°C Martens point = +64.5°C 7 days / +35°C ASTM D648 heat deflection temperature = +58°C																		
Mechanical / Physical Properties																			
Compressive Strength	(According to FIP 5.12 and DIN 1164.7) <table border="1"> <thead> <tr> <th>Curing time</th> <th>Temperature</th> <th>Compressive strength</th> </tr> </thead> <tbody> <tr> <td>24 hours</td> <td>+10°C</td> <td>> 45 N/mm²</td> </tr> <tr> <td>24 hours</td> <td>+15°C</td> <td>> 60 N/mm²</td> </tr> <tr> <td>24 hours</td> <td>+20°C</td> <td>65 - 70 N/mm²</td> </tr> <tr> <td>24 hours</td> <td>+25°C</td> <td>75 - 80 N/mm²</td> </tr> <tr> <td>24 hours</td> <td>+30°C</td> <td>75 - 80 N/mm²</td> </tr> </tbody> </table>	Curing time	Temperature	Compressive strength	24 hours	+10°C	> 45 N/mm ²	24 hours	+15°C	> 60 N/mm ²	24 hours	+20°C	65 - 70 N/mm ²	24 hours	+25°C	75 - 80 N/mm ²	24 hours	+30°C	75 - 80 N/mm ²
Curing time	Temperature	Compressive strength																	
24 hours	+10°C	> 45 N/mm ²																	
24 hours	+15°C	> 60 N/mm ²																	
24 hours	+20°C	65 - 70 N/mm ²																	
24 hours	+25°C	75 - 80 N/mm ²																	
24 hours	+30°C	75 - 80 N/mm ²																	
Shear Strength	(According to FIP 5.15, Slant shear cylinder test) <table border="1"> <thead> <tr> <th>Temperature</th> <th>Shear strength</th> </tr> </thead> <tbody> <tr> <td>+40°C</td> <td>> 15 N/mm²</td> </tr> <tr> <td>+45°C</td> <td>14 - 16 N/mm²</td> </tr> <tr> <td>+50°C</td> <td>13 - 15 N/mm²</td> </tr> </tbody> </table>	Temperature	Shear strength	+40°C	> 15 N/mm ²	+45°C	14 - 16 N/mm ²	+50°C	13 - 15 N/mm ²										
Temperature	Shear strength																		
+40°C	> 15 N/mm ²																		
+45°C	14 - 16 N/mm ²																		
+50°C	13 - 15 N/mm ²																		
E-Modulus	Instant Modulus: 10'000 N/mm ² Deferred Modulus: 9'500 N/mm ² (According to FIP 5.15)																		
Elongation at Break	0.6% (14 days / +23°C)																		
Strength Development	Confirm the strength development by producing cubes on site and testing them for compressive and flexural strength.																		
Resistance																			
Thermal Resistance	Meets the requirements of FIP 5.10, DIN 53458 and ASTM D648.																		

System Information

Application Details

Substrate Quality Concrete should be cured for at least 28 days, (depends on minimal requirement of strengths) and have an open textured profile. Any cement laitance should be removed. Substrate must be sound and free of all loose or friable particles with a minimum compressive strength 25 N/mm² and a minimum pull off 1.5 N/mm². Substrate must be clean and free of all contaminants such as dirt, oils and grease, surface treatments or coatings etc.. Substrate must be dry or mat damp and free from any standing water, ice etc..

Substrate Preparation Concrete:
The surfaces must be cleaned and mechanically prepared to achieve the desired substrate quality.

Application Conditions / Limitations

Substrate Temperature +30°C min. / +45°C max.

Ambient Temperature +30°C min. / +45°C max.

Material Temperature **Sikadur®-31 SBA S-02** must be at a temperature of between +5°C and +30°C for application.

Substrate Humidity When applied to mat moist concrete, brush the adhesive well into substrate.

Dew Point Beware of condensation!
Ambient temperature during application must be at least 3°C above dew point.

Application Instructions

Mixing Part A : part B = 3 : 1 by weight or volume

Mixing Time

Pre-batched units:

Mix parts A+B together for at least 3 minutes with a mixing spindle attached to a slow speed electric drill (max. 600 rpm) until the material becomes smooth in consistency and a uniform grey colour. Avoid aeration while mixing. Then, pour the whole mix into a clean container and stir again for approx. 1 more minute at low speed to keep air entrapment at a minimum. Mix only that quantity which can be used within its potlife.

Application Method / Tools Apply the mixed adhesive to the prepared surface with a spatula, trowel, notched trowel, or with hands protected by gloves.

Cleaning of Tools Clean all tools and application equipment with Sika® Colma Cleaner immediately after use. Hardened / cured material can only be mechanically removed.

Potlife Quantity: 1 litre (~ 1.8 kg) (According to FIP 5.1 and 5.2)

Temperature	+20°C	+25°C	+30°C	+35°C	+40°C
Potlife	> 50 minutes	~ 50 minutes	~ 30 minutes	~ 20 minutes	~ 15 minutes
Open time	-	-	> 60 minutes	~ 50 minutes	~ 45 minutes

The potlife begins when the resin and hardener are mixed. It is shorter at high temperatures and longer at low temperatures. The greater the quantity mixed, the shorter the potlife.

Notes All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

Local Restrictions Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

Health and Safety Information

For information and advice on the safe handling, storage and disposal of chemical products, users should refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.

Legal Notes

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users should always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request
